Rajd SysTech AB respond to increasing and expanding business with even more strengthening our organization

PRESS RELEASE, PITEÅ, JUNE 2023

The Swedish company Rajd SysTech develops and markets turn-key safety solutions for the management of proving grounds, primarily within the automotive industry. The Rajd Proving Ground Management solution (RPGM) offers the most cost-effective and customizable solution on the market while prioritizing safety. It enables increased density of test vehicles, improves operational efficiency, and allows for efficient planning and resource allocation.

In response to the increasing global demand for the RPGM Solution, which incorporates RKT precision and High-Speed Collision Warning, Rajd Systech AB is further reinforcing our organization by welcoming Mr Ajith Ukwatta as Support and Installation Engineer. Ajit started his career as an automation engineer covering in Automated System design, PLC/Micro controller programming, software development, etc. A Master's degree in mechanical engineering was finalized at Clarkson University, USA in 2014. Last five years, Ajith worked with developing software/IoT solutions for fleet management as well as for education industry. His main responsibilities at Rajd Systch AB will be to handle Client Support, Implementation, and Installations.

"We are very happy to welcome Ajith to our Team and are rest assured that he will be a great asset as well as appreciated by our clients."

Pia Grafström, Director of Marketing and Sales.
