

Rajd SysTech AB sealed significant deal with one of the world's largest global auto part manufacturer

PRESS RELEASE, PITEÅ, JAN 2017

The Swedish company Rajd SysTech, recently partly acquired by the Data Ductus group, is developing and marketing turn-key solutions for management of proving grounds for the automotive industry. Rajd (product former known as "Nelson") PGM is a cost-efficient solution for proving grounds and test tracks globally that enforces safety, increases the density of test vehicles, improves efficiency of operations and allows for efficient planning and allocation of resources.

The Client, a global group based in Europe is a world leading manufacturer of braking systems for rail and commercial vehicles. For more than 110 years now the company has pioneered the development, production, marketing and servicing of state-of-the-art braking systems. The Group is represented across the globe, with over 100 production sites in 30 countries and the Groups Commercial Vehicle Systems division offers its customers braking systems for trucks, buses, trailers and agricultural machinery.

- *- We are very proud to add this significant company to our client list and are fortunate to be chosen as a partner to assist in improving safety and security at their test tracks" Says CEO Jonas Moberg of Rajd SysTech AB"*
