

Rajd Proving Ground Management Solution installed at TRC California for advanced mobility research and testing

Transportation Research Center Inc. (TRC Inc.) is North America’s most advanced, independent mobility testing service provider, fulfilling the complex engineering, research, evaluation and testing needs of the world’s leading transportation companies. With almost 50 years of engineering expertise and industry knowledge, TRC Inc. serves the needs of industries, governments, trade associations and educational institutions worldwide.

In May 2021, TRC Inc. expanded the reach of its world-class engineering and technical expertise with the introduction of TRC California, a 225-acre automotive technology testing and research complex near Silicon Valley. TRC built out its new TRC California testing site to offer a comprehensive, one-stop shop for West Coast automotive technology and mobility innovators to affirm the performance, safety, quality and competitiveness of new technologies that are changing the face of transportation worldwide.

Client statement:

“This system enables us to have better situational awareness of all activities occurring on our test facility. We can quickly see on the dashboard where each vehicle is located, what speed they are traveling, and what group/client they are associated with.”

“The configurable events provide instantaneous alerts to both the operator, and users on the site.”

“By incorporating scheduling, users, groups, vehicles, resources and mobile units into one integrated solution, the Rajd Proving Ground Management Solution makes it easier to manage our day-to-day testing and administrative activities.”

Andrew Mathers

Director of Proving Ground Management
